## About the National KE-CIRT/CC

---

The Kenya Information and Communications Act, 1998, mandates the Communications Authority of Kenya (CA) to develop a framework for facilitating the investigation and prosecution of cybercrime offences. It is in this regard, and in order to mitigate cyber threats and foster a safer Kenyan cyberspace, that the government established the National Kenya Computer Incident Response Team – Coordination Centre (National KE-CIRT/CC).

The Authority's National KE-CIRT/CC is a multi-agency collaboration framework that coordinates response to cyber security matters at the national level in collaboration with relevant actors locally and internationally. The National KE-CIRT/CC, which is based at the CA Centre Nairobi, comprises staff from the Communications Authority and law enforcement agencies.

The National KE-CIRT/CC detects, prevents and responds to various cyber threats targeted at the country on a 24/7 basis. It also acts as the interface between local and international ICT services providers whose platforms are used to perpetrate cybercrimes, and our Judicial Law and Order Sector which investigates and prosecutes cybercrimes. The enactment of the Computer Misuse and Cyber Crimes Act of 2018 has further enhanced the multi-agency collaboration framework.

### ***National KE-CIRT/CC Functions***

The functions of the National KE-CIRT/CC include the following:

- Implementation of national cybersecurity policies, laws and regulations.
- Cybersecurity awareness and capacity building.
- Early warning and technical advisories on cyber threats on a 24/7 basis.
- Technical co-ordination and response to cyber incidents on a 24/7 basis in collaboration with various actors locally and internationally.
- Development and implementation of a National Public Key Infrastructure (NPKI).
- Research and development in cybersecurity.
